Dear Julia and all,

Thank you very much for your email. It is a great pleasure to meet you all.

As Julia mentioned, my main research area is trace element epidemiology, with a particular focus on the impact of environmental exposure to heavy metals during vulnerable windows. However, I am also involved in a research project on regulated deficit irrigation with my colleague, Prof. Francisca Hernández (cc), and the group. This project (2022/040) is part of the Agroalnext framework (<https://agroalnextgva.umh.es/>), and further details can be found at the following links: <https://agroalnextgva.umh.es/2023/07/04/040-hidrosostenible/> and <https://agroalnextgva.umh.es/files/2024/09/D040-HidroSOSstoneFruit.pdf>

I look forward to exploring potential collaborations and learning more about your work. Please don't hesitate to reach out if you need further information or have any questions.

Best regards,

Toni Signes

Dear Clinton,

That sounds great! I hope everything goes well.

Indeed, our regions have a lot in common regarding water availability and management.

Best,

Toni Signes

Toni and Francisca,

Nice to e-meet you. I am currently in the final days of the end of our fiscal year so am very busy. However, I would like to further discuss opportunities to collaborate after October 1st. I think that there are a number of opportunities where we could work together. Your region of Spain has a lot in common with Arizona related to irrigation and using wastewater to fill in in times of water scarcity.

Clinton
